

St. Xavier's College (Autonomous) Mumbai

Syllabus For 4th Semester Courses in **LIFE SCIENCE** (June 2020 onwards)

Contents:

Syllabus (theory and practicals) for Courses:

SLSC0401	Comparative Physiology II
SLSC0402	Molecular Biology
SLSC0403	Biostatistics and Population Genetics
SLSC04PR	Practicals

Template for theory and practical question paper
Evaluation and Assessment Grid

Percent revision:

2015-16: No revision

2016-17: No revision

2017-18: 16% (0402)

2018-19: 40-50% revision to practicals

2019-20: 5% (0401) and 1% (0403)

LIFE SCIENCE

S.Y.B.Sc.

Course No.: SLSC0401

Title: Comparative Physiology- II

Learning Objectives

The course aims to:

1. Introduce a student to the various endocrine hormones and their role in the maintenance of homeostasis.
2. Help the learner understand the organization of the nervous system and the physiological principles underlying nervous function.
3. Provide an insight into the various mechanisms for regulation of body temperature.
4. Elucidate the processes of gametogenesis, reproduction and embryo development in various life forms

Self Study: Levels of organization – cells, tissues, organs, organ systems; epithelial and connective tissue

Number of lectures: 45

UNIT I: Endocrine system

(15 lectures)

Endocrine system

1. Endocrine glands and Hormones: Insect and Amphibian (2)
2. Positive and negative feedback and Concept of Neuroendocrine coordination (1)
3. Plant hormones: Auxins, Gibberillins, Cytokinins, Abscissic acid and Ethylene (2)
4. Endocrine System in humans (7)
 - a. Endocrine glands; Hormones – types; Hierarchical organization of the endocrine system
 - b. Mechanism of Hormone action – hormone receptors and their up and down regulation; mode of action via membrane receptors eg. epinephrine- upto secondary messenger; intracellular receptor eg: steroid hormone
 - c. Role of hormones in the maintenance of homeostasis: Thyroid - T3, T4, Pancreas-
 - i. Insulin, glucagon
 - ii. Adrenal gland - cortex – glucocorticoids & mineralocorticoids medulla – epinephrine
 - iii. Pituitary – Anti-Diuretic Hormone (ADH)
5. Temperature Regulation (3)
 - a. Poikilothermy and Homeothermy
 - b. Regulation of Body temperature at temperature extremes

UNIT II: Nervous and Muscular System

(15 lectures)

1. Nervous system (3)
 - a. Evolution of the nervous system: Invertebrate to Vertebrate Brain
2. Nervous system in humans (7)
 - a. Central Nervous System: Brain – membranes and parts; Spinal cord – sensory and motor tracts; Peripheral Nervous System: Somatic and Autonomic
 - b. Cells of nervous tissue – Neurons, Neuroglia and Synapses
 - c. Ion channels, Resting membrane potential and Action Potential

3. Muscular system (5)
 - a. Structure of the neuromuscular junction and the mechanism of action potential generation in the skeletal muscle.
 - b. Physiology of the skeletal and smooth muscle contraction.

UNIT III: Reproductive systems and Development (15 lectures)

1. Reproduction (4)
 - a. Asexual: Budding, Parthenogenesis, Spore formation, Vegetative propagation
 - b. Sexual reproduction:
 - i. Gametogenesis- angiosperm
 - ii. Types of eggs
 - iii. Fertilization – Internal and External, Hermaphroditism
 - c. Reproductive System of humans (4)
 - i. Overview of the male and female reproductive system; Oogenesis & Spermatogenesis; Structure of sperm and eggs
 - ii. Reproductive Hormones; Female reproductive cycle
 - iii. Birth-control measures
2. Development (7)
 - a. Embryogenesis in plants
 - b. Patterns of Cleavage, Blastulation and Gastrulation in Amphibians
 - c. Embryonic Development: Fertilization, Formation of Morula, Blastocyst, Implantation; Role of Hormones
 - d. Assisted Reproductive Technology

LIFE SCIENCE

S.Y.B.Sc

Course No.: SLSC0402

Title: Molecular Biology

Learning Objectives:

This course aims to provide molecular understanding of the information processing pathways in the cell that lead to the expression of the genetic information in DNA.

1. To understand the molecular processes in DNA replication, DNA repair, transcription and translation.
2. To understand the molecular basis of mutations and how it leads to human genetic disorders.
3. To comprehend the principles of gene expression and its regulation in prokaryotes and eukaryotes.

Number of lectures: 45

Unit I: (15 lectures)

1. DNA replication (6)
 - a. Basic structure of double-stranded DNA,
 - b. Messelson and Stahl Experiment
 - c. DNA replication in *E.coli*
 - d. Replication of Eukaryotic Chromosomes: multiple origins, end-replication problem.
2. Molecular Concept of a gene (1)
3. a. Transcription in *E. coli* (7)
 - b. Transcription in Eukaryotes (3)
 - i. Types of RNA polymerases
 - ii. RNA polymerase II transcription in brief
 - iii. Pre-mRNA processing
 - c. Reverse transcriptase (1)

Unit II: (15 lectures)

1. Translation (7)
 - a. The Genetic Code
 - b. Structure of ribosomes and Transfer-RNA
 - c. Protein synthesis in *E.coli*
 - d. Protein synthesis inhibitors eg: streptomycin, puromycin
2. Gene regulation in *E. coli* (8)
 - a. Lambda phage: Choice between lytic and lysogenic cycles (self study)
 - b. Lac operon
 - c. Tryptophan operon
 - d. Problems on Lac operon

Unit III:

(15 lectures)

DNA damage

1. Mutagenic agents and their mode of action: physical – X –rays and UV rays and chemical – any four.
2. Classification of mutations: germ line versus somatic; spontaneous v/s induced; point v/s chromosomal (giving examples of *Drosophila* mutants).
3. Point Mutations: Base substitution: transitions, transversions; Frame-shift: addition, deletion, suppressor mutations.
4. Chromosomal mutations: Structural: deficiency, duplication, inversion, translocation. Numerical: aneuploidy, euploidy, concept of non-dysjunction
5. Human genetic disorders: Sickle cell anemia, Philadelphia chromosome, Down's syndrome, Turner's syndrome, Fragile X syndrome
6. DNA repair mechanisms – Photo - reactivation repair

LIFE SCIENCE

S.Y.B.Sc

Course Code: SLSC0403

Title: Biostatistics and Population Genetics

Learning Objectives:

1. To equip students with basic statistical concepts and methods.
2. To introduce students to the display and communication of statistical data. This will include graphical and exploratory data analysis.
3. To help students understand estimation, testing and interpretation for single group summaries such as mean, median, variance, correlation and regression.
4. To promote an understanding of the basics of hypothesis testing, confidence intervals and the interpretation and application of commonly used statistical tests – Z, t, Chi square.
5. To aid in the understanding of the basic concepts of ANOVA.
6. To explain the Hardy-Weinberg law of equilibrium and to solve a simple Hardy-Weinberg equation to calculate genotype frequencies.
7. To understand the various factors that affect Hardy-Weinberg equilibrium.

Number of lectures: 45

UNIT I: Biostatistics (15 lectures)

1. Introduction to Biostatics: Terms used in Biostatistics, Types of Data, (1)
2. Presentation of Data: qualitative and quantitative (1)
3. Measures of Central tendency: Mean, Median, Mode; Normal and skewed distributions, kurtosis (5)
4. Measures of Variation: range, variance, standard deviation, coefficient of variation (4)
5. Measures of location: Percentiles, 'z' score, probability calculations (3)
6. Concept of sampling: random sample, sample size determination, precision (1)

UNIT II: Biostatistics (15 lectures)

1. Analysis of data
 - a. Quantitative data:
 - i. Normal Distribution, concept of sampling error and standard error (2)
 - ii. Hypothesis testing: (5)
unpaired and paired 't' test, Type I and Type II errors
 - iii. ANOVA (single factor), Tukey's post hoc test (4)
 - b. Qualitative data:
 - i. χ^2 test as a test of association (2)
 - ii. Standard error of proportion
 - c. Non-parametric test: Sign test (1)
2. Concept of correlation between two variables and regression line (1)

UNIT III: Population Genetics

(15 lectures)

1. Introduction to Population Genetics: Concept of gene pool; genetic diversity in populations: polymorphism and heterogeneity (3)
2. Allelic and genotypic frequencies in populations: Hardy Weinberg Law relating allelic and genotypic frequencies in an ideal population: for two alleles, multiple alleles and X linked alleles; testing populations for Hardy Weinberg equilibrium (3)
3. Evolutionary factors responsible for altering allelic frequencies in natural populations and their effects: (7)
 - a. Mutations
 - b. Migration
 - c. Random genetic drift
 - d. Non random mating
 - e. Natural selection: Concept of fitness and its contribution to allelic frequencies.
4. Numerical problems on all of the above (2)

Reference books for Biostatistics:

1. *Biometry: the principles and practice of Statistics for Biology research* (1995) 4th Edition, Sokal, R. and Rohlf, H. W H Freeman.
2. *Biostatistical analysis* (1998) 2nd Edition, Zar, J. Prentice Hall.
3. *Fundamentals of Biostatistics* (1995) 4th Edition, Rosner, B. Duxbury Press.
4. *Biostatistics: A Foundation for Analysis in Health Sciences* (2005) 8th Edition, Daniel W.W. Wiley.

Reference books for Population Genetics:

1. *iGenetics – A molecular approach* (2009) 3rd Edition, Russel, P. Benjamin Cummings Publication.
2. *Concepts of Genetics* (2006) 8th Edition, Klug, W. and Cummings, M. Prentice Hall
3. *Principles of Biology* (2008) 4th Edition, Brooker, R., Widmaier, E., Graham, L., Stiling, P. McGraw Hill Education.
4. *Genetics* (1985) Strickberger, M.W. Prentice Hall.

Practicals: SLSC04PR

Comparative Physiology 2:

1. Histological study of kidney, liver, testis, thyroid, adrenal, stomach, thymus, bone marrow and cartilage
2. Determination of cell viability by dye exclusion method
3. Total RBC count
4. Total WBC count
5. Differential WBC count
6. Study of the effect of minerals/ heavy metals on heart rate of Daphnia
7. Study of the effect of exercise/ environment on physiological parameters – heart rate, blood pressure and oxygen saturation

Molecular Biology:

1. UV survival curve of *E. coli*
2. Replica plating of auxotrophic/ antibiotic resistant bacteria
3. Screening of antibiotic resistant mutants
4. UV light repair
5. UV dark repair
6. Isolation of lysozyme from egg white and its effect on Gram-positive and Gram-negative bacteria

Biostatistics and Population Genetics:

1. Presentation of data: qualitative and quantitative, continuous and discrete using excel sheet.
2. Measures of Central Tendency: mean (with assumed mean), median, mode
3. Measures of Location: Percentiles & probability, 'Z' score
4. Measures of variation: range, standard deviation
5. Concept of sampling: methods of sampling, importance of sample size, precision
6. Paired and unpaired 't' test
7. Standard error of proportion and χ^2
8. Correlation and Regression using experimental data
9. Study of Genetic Variation in human populations and application of Hardy Weinberg Law (preferably from data collected by students)
10. Study of effects of different evolutionary forces on allelic frequencies: problems

Use of MS Excel and SPSS for solving problems.

Template of Theory Question paper

Courses: SLSC0401, 0402 & 0403

CIA I – 20 marks, 45 mins.

Unit I: Objectives/numerical problems, not more than 5 marks each

CIA II – 20 marks

Unit II: Test (*45 mins*) /Survey /Assignment /Presentation /Poster /Essay /Review

End Semester exam – 60 marks, 2 hours

Question 1: Unit I: maximum marks per sub-question - 6 marks

20 marks to be answered out of 28-30 marks

Question 2: Unit II: maximum marks per sub-question - 6 marks

20 marks to be answered out of 28-30 marks

Question 3: Unit III: maximum marks per sub-question - 6 marks

20 marks to be answered out of 28-30 marks

Mark-distribution pattern for Practical

Courses: SLSC04PR

End Semester Practical Examination

Experiments

Total marks: 150

75 - 105 marks

Identification

30 - 60 marks

Journal

15 marks
